Precision and reliability in perfect balance

WEIGH LOGIC TRACEWASTE SOLUTIONS
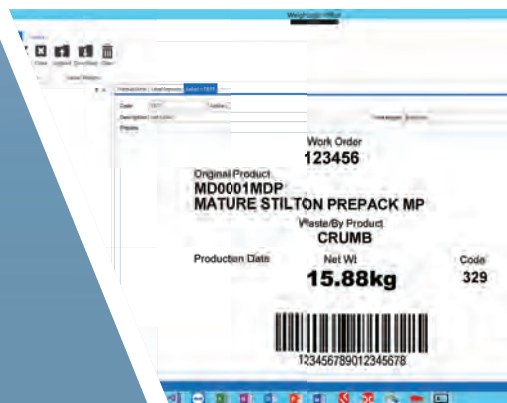

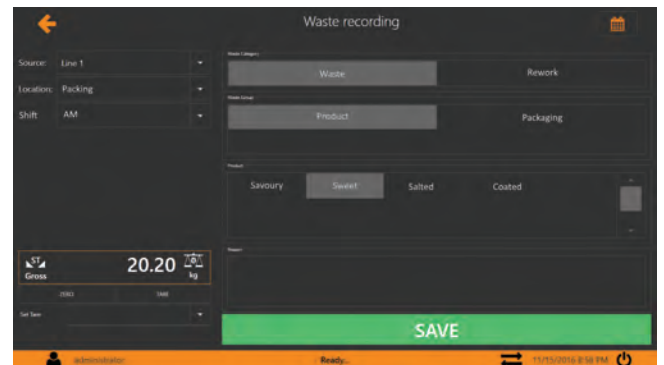

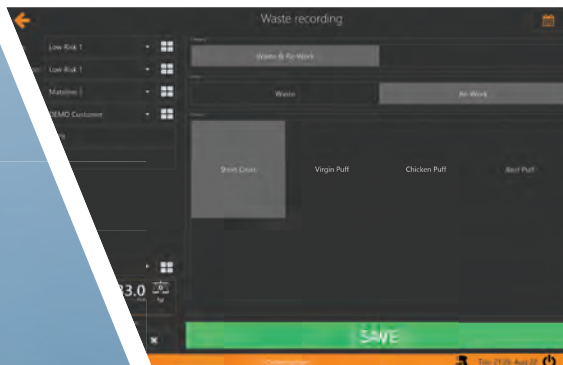

MWS LIMITED

Your flexible, configurable system

MWS **TraceWaste** is a module of the MWS Weigh Logic suite of production control software programs.

TraceWaste is a flexible, configurable system that can capture and record waste by;

- Site

- Department

- Location (Production Line)

- Operator

- Waste Category

- Waste Group

- Waste Product

- Reasons for Waste

TraceWaste runs on industrial touch screen PC terminals

Tracewaste

TraceWaste comprises of two software components.

• Weigh Logic Office Client (with **TraceWaste** module)

• Weigh Logic Shop Floor Terminal (with **TraceWaste** module)

TraceWaste Office Client runs on an office PC/Server running Windows 7/8/10. The office client is used to configure the system and edit the database contents in order to capture the information required by the site. It is also used for reporting on the waste data collected in real time by the system.

TraceWaste shop floor terminal runs on any Windows 7/8/10 PC, however it is optimized for touch screen use as normally found on industrial touch screen terminals. The user friendly operator interface minimizes operator error and training requirements. All data is stored directly from the terminal in a Microsoft SQL database that can be ran locally, but is more commonly installed on a host PC or database server.

The terminal will normally be connected to any of a range of weighing units for weighing from waste bags to waste skips depending upon application.
